**Exploring Collaborative Research in Primary Care** Apr 05 2020 The contributors to this book suggest that the failure of much primary care research is due to specialization and the fact that this in turn results in an emphasis on individual problems or illnesses and a reliance on technology. *Collaborative Caring* Aug 02 2022 Teamwork is essential to improving the quality of patient care and reducing medical errors and injuries. But how does teamwork really function? And what are the barriers that sometimes prevent smart, well-intentioned people from building and sustaining effective teams? Collaborative Caring takes an unusual approach to the topic of teamwork. Editors Suzanne Gordon, David L. Feldman, MD, and Michael Leonard, MD, have gathered fifty engaging first-person narratives provided by people from various health care professions. Each story vividly portrays a different dimension of teamwork, capturing the complexity—and sometimes messiness—of moving from theory to practice when it comes to creating genuine teams in health care. The stories help us understand what it means to be a team leader and an assertive team member. They vividly depict how patients are left out of or included on the team and what it means to bring teamwork training into a particular workplace. Exploring issues like psychological safety, patient advocacy, barriers to teamwork, and the kinds of institutional and organizational efforts that remove such barriers, the health care professionals who speak in this book ultimately have one consistent message: teamwork makes patient care safer and health care careers more satisfying. These stories are an invaluable tool for those moving toward genuine interprofessional and intraprofessional teamwork.

**Interprofessional Education for Collaboration** Oct 12 2020 Every year, the Global Forum undertakes two workshops whose topics are selected by the more than 55 members of the Forum. It was decided in this first year of the Forum's existence that the workshops should lay the foundation for future work of the Forum and the topic that could best provide this base of understanding was "interprofessional education." The first workshop took place August 29-30, 2012, and the second was on November 29-30, 2012. Both workshops focused on linkages between interprofessional education (IPE) and collaborative practice. The difference between them was that Workshop 1 set the stage for defining and understanding IPE while Workshop 2 brought in speakers from around the world to provide living histories of their experience working in and between interprofessional education and interprofessional or collaborative practice. A committee of health professional education experts planned, organized, and conducted a 2-day, interactive public workshop exploring issues related to innovations in health professions education (HPE). The committee involved educators and other innovators of curriculum development and pedagogy and will be drawn from at least four health disciplines. The workshop followed a high-level framework and established an orientation for the future work of the Global Forum on Innovations in Health Professional Education. Interprofessional Education for Collaboration: Learning How to Improve Health from Interprofessional Models Across the Continuum of Education to Practice summarizes the presentations and small group discussions that focused on innovations in five areas of HPE: 1. Curricular innovations - Concentrates on what is being taught to health professions' learners to meet evolving domestic and international needs; 2. Pedagogic innovations - Looks at how the information can be better taught to students and WHERE education can take place; 3. Cultural elements - Addresses who is being taught by whom as a means of enhancing the effectiveness of the design, development and implementation of interprofessional HPE; 4. Human resources for health - Focuses on how capacity can be innovatively expanded to better ensure an adequate supply and mix of educated health workers based on local needs; and 5. Metrics - Addresses how one measures whether learner assessment and evaluation of educational impact and care delivery systems influence individual and population health.

**Clinical Uncertainty in Primary Care** Aug 22 2021 The Power of Colleagues What happens when primary care clinicians meet together on set aside time in their practice settings to talk about their own patients? ..... Complimenting quality metrics or performance measures through discussing the actual stories of individual patients and their clinician-patient relationships In these settings, how can clinicians pool their collective experience and apply that to 'the evidence' for an individual patient? ..... Especially for patients who do not fit the standard protocols and have vague and worrisome symptoms, poor response to treatment, unpredictable disease courses, and/or compromised abilities for shared decision making What follows when discussion about individual patients reveals system-wide service gaps and coordination limitations? ..... Particularly for patients with complex clinical problems that fall outside performance monitors and quality screens How can collaborative engagement of case-based uncertainties with one's colleagues help combat the loneliness and helplessness that PCPs can experience, no matter what model or setting in which they practice? ..... And where they are expected to practice coordinated, evidence-based, EMR-directed care These questions inspired Lucia Sommers and John Launer and their international contributors to explore the power of colleagues in "Clinical Uncertainty in Primary Care: The Challenge of Collaborative Engagement" and offer antidotes to sub-optimal care that can result when clinicians go it alone. From the Foreword: "Lucia Sommers and John Launer, with the accompanying input of their contributing authors, have done a deeply insightful and close-to-exhaustive job of defining clinical uncertainty. They identify its origins, components and subtypes; demonstrate the ways in which and the extent to which it is intrinsic to medicine...and they present a cogent case for its special relationship to primary care practice..." 'Clinical Uncertainty in Primary Care' not only presents a model of collegial collaboration and support, it also implicitly legitimates it.' Renee Fox, Annenberg Professor Emerita of the Social Sciences, University of Pennsylvania.

**Collaborative Framework for Care and Control of Tuberculosis and Diabetes** Aug 29 2019 "Given the absence of international guidelines on the joint management and control of TB and diabetes, the World Health Organization (WHO) and the International Union Against Tuberculosis and Lung Disease (the Union) identified key questions to be answered and commissioned systematic reviews of studies addressing those questions. A series of expert consultations were organized to assess the findings of the systematic reviews and a guideline group was established to develop this provisional collaborative framework. The framework aims to guide national programmes, clinicians and others engaged in care of patients and prevention and control of diabetes and TB on how to establish a coordinated response to both diseases, at organizational and clinical levels. The framework is based on evidence collated from systematic reviews and existing guidelines on the diagnosis and management of TB and diabetes. The systematic reviews confirmed the weak evidence base for the effectiveness and cost-effectiveness of collaborative interventions. The framework is therefore provisional; several of its recommendations are provisional pending better evidence. In order to provide advice on how to fill the knowledge gaps, the framework includes a list of priority research areas." - p. vii-viii

**The Case for Interprofessional Collaboration** Feb 02 2020 The Case for Interprofessional Collaboration recognises and explores the premium that modern health systems place on closer working relationships. Each chapter adopts a consistent format and a clear framework for professional relationships, considering those with the same profession, other professions, new partners, policy actors, the public and with patients. Section one, Policy into Practice, considers a series of analytical models which provide a contemporary account of collaboration theory, including global developments. The second section of the book, Practice into Policy, examines real-life drivers for behavioural change. The third section evaluates personal learning and learning together. \* Highlights the barriers to collaboration, how to overcome them, and the resulting dividends \* Enlivens health policy with a view to transformative adaptations in the workplace \* Draws on international examples of effective practice for local application This book is designed for those in the early stages of their careers as health and social care professionals. It is also aimed at managers and educators, to guide them in commissioning and providing programmes to promote collaboration.

**Collaborative Clinical Education** Sep 22 2021 This book is intended for those who are now, and those who intend to become, clinical teachers in the health professions. Its primary focus is the teaching of medical students and residents, but the principles discussed apply equally to teaching students in other health professions. The main focus is on the process of teaching--the strategies and tactics involved in helping others learn--and the authors discuss the generic steps, strategies, and principles of effective teaching that apply in any clinical setting. They do, however, draw numerous examples from clinical education in a variety of settings. The authors specifically stress the notion of collaboration, an issue closely related to the public's considerable dissatisfaction with the modern health care system. To create a more effective, responsive system, they argue, there is a need to change the ways that health care is provided and the way it is taught. A collaborative approach is needed in both health care and medical education, one that involves partnerships between clinicians and patients, and between teachers and learners. Also prominent throughout the book is the idea that clinical education can be planned and conducted in far more systematic ways than is now common. An overarching goal of the book is to provide readers with an enlarged set of options to consider using when faced with the inevitable multiplicity of decisions confronting clinical educators.

**Measuring the Impact of Interprofessional Education on Collaborative Practice and Patient Outcomes** Jan 27 2022 Interprofessional teamwork and collaborative practice are emerging as key elements of efficient and productive work in promoting health and treating patients. The vision for these collaborations is one where different health and/or social professionals share a team identity and work closely together to solve problems and improve delivery of care. Although the value of interprofessional education (IPE) has been embraced around the world - particularly for its impact on learning - many in leadership positions have questioned how IPE affects patient, population, and health system outcomes. This question cannot be fully answered without well-designed studies, and these studies cannot be conducted without an understanding of the methods and measurements needed to conduct such an analysis. This Institute of Medicine report examines ways to measure the impacts of IPE on collaborative practice and health and system outcomes. According to this report, it is possible to link the learning process with downstream person or population directed outcomes through thoughtful, well-designed studies of the association between IPE and collaborative behavior. Measuring the Impact of Interprofessional Education on Collaborative Practice and Patient Outcomes describes the research needed to strengthen the evidence base for IPE outcomes. Additionally, this report presents a conceptual model for evaluating IPE that could be adapted to particular settings in which it is applied. Measuring the Impact of Interprofessional Education on Collaborative Practice and Patient Outcomes addresses the current lack of broadly applicable measures of collaborative behavior and makes recommendations for resource commitments from interprofessional stakeholders, funders, and policy makers to advance the study of IPE.
