Handbook of Dynamic System Modeling Mar 05 2020 The topic of dynamic models tends to be splintered across various disciplines, making it difficult to uniformly study the subject. Moreover, the models have a variety of representations, from traditional mathematical notations to diagrammatic and immersive depictions. Collecting all of these expressions of dynamic models, the Handbook of Dynamic System Modeling explores a panoply of different types of modeling methods available for dynamical systems. Featuring an interdisciplinary, balanced approach, the handbook focuses on both generalized dynamic knowledge and specific models. It first introduces the general concepts, representations, and philosophy of dynamic models, followed by a section on modeling methodologies that explains how to portray designed models on a computer. After addressing scale, heterogeneity, and composition issues, the book covers specific model types that are often characterized by specific visual- or text-based grammars. It concludes with case studies that employ two well-known commercial packages to construct, simulate, and analyze dynamic models. A complete guide to the fundamentals, types, and applications of dynamic models, this handbook shows how systems function and are represented over time and space and illustrates how to select a particular model based on a specific area of interest.

Soviet Security and Intelligence Organizations, 1917-1990 May 07 2020 One of the hallmarks of the Soviet system was its heavy reliance on internal and foreign security and intelligence organizations. Parrish's unique work provides biographies on some 4,000 officials in senior and mid-level positions who had served in Cheka, NKVD/RFSFR, GPU, KGB, Militia, Border Troop, and other organizations. Also included are officials of the Committee for State Control and promininent politicians with earlier ties to security organizations. In addition, Parrish surveys the English-language literature published from 1917 to 1990 which dealt with Soviet security and intelligence. The volume concludes with a biographical addendum, a glossary of terms, and material showing the development of the various security organizations.

A User's Guide to ISRP Sep 10 2020 This report describes the capabilities and use of the Interactive Survey Reduction Program (ISRP). ISRP is a FORTRAN program which permits interactive reduction, editing, and plotting of field survey notes and the correction of previously entered data. The primary output from ISRP is a two-dimensional distance offshore and elevation data file compatible with the Beach Profile and Analysis System (BPAS) program developed by CERC (see CERC TR 82-1). The BPAS includes six modules for use in editing, analyzing, and plotting beach profile data; it provides a powerful tool for studying beach profile changes. Because the data format created by ISRP is sufficiently general, anyone processing most kinds of beach and nearshore survey data will find ISRP useful. This report includes detailed discussions of each ISRP option. Appendices A-D contain an option summary, a sample run, a discussion of program mechanics, and installation-specific instructions for executing ISRP. The ISRP program is not included in this report but is available from the Engineer Computer Program Library, US Army Engineer Waterways Experiment Station, Vicksburg, Miss.

Big Java Jul 29 2019 Big Java: Early Objects, 7th Edition focuses on the essentials of effective learning and is suitable for a two-semester introduction to programming sequence. This text requires no prior programming experience and only a modest amount of high school algebra. Objects and classes from the standard library are used where appropriate in early sections with coverage on object-oriented design starting in Chapter 8. This gradual approach allows students to use objects throughout their study of the core algorithmic topics, without teaching bad habits that must be un-learned later. The second half covers algorithms and data structures at a level suitable for beginning students. Choosing the enhanced eText format allows students to develop their coding skills using targeted, progressive interactivities designed to integrate with the eText. All sections include built-in activities, open-ended review exercises, programming exercises, and projects to help students practice programming and build confidence. These activities go far beyond simplistic multiple-choice questions and animations. They have been designed to guide students along a learning path for mastering the complexities of programming. Students demonstrate comprehension of programming structures, then practice programming with simple steps in scaffolded settings, and finally write complete, automatically graded programs. The perpetual access VitalSource Enhanced eText, when integrated with your school's learning management system, provides the capability to monitor student progress in VitalSource SCORECenter and track grades for homework or participation. *Enhanced eText and interactive functionality available through select vendors and may require LMS integration approval for SCORECenter.
