Technology as Experience Mar 29 2022 In *Technology as Experience*, John McCarthy and Peter Wright argue that any account of what is often called the user experience must take into consideration the emotional, intellectual, and sensual aspects of our interactions with technology. We don't just use technology, they point out; we live with it. They offer a new approach to understanding human-computer interaction through examining the felt experience of technology. Drawing on the pragmatism of such philosophers as John Dewey and Mikhail Bakhtin, they provide a framework for a clearer analysis of technology as experience. Just as Dewey, in *Art as Experience*, argued that art is part of everyday lived experience and not isolated in a museum, McCarthy and Wright show how technology is deeply embedded in everyday life. The "zestful integration" or transcendent nature of the aesthetic experience, they say, is a model of what human experience with technology might become. McCarthy and Wright illustrate their theoretical framework with real-world examples that range from online shopping to ambulance dispatch. Their approach to understanding human computer interaction—seeing it as creative, open, and relational, part of felt experience—is a measure of the fullness of technology's potential to be more than merely functional.

Grumman F11F Tiger Pilot's Flight Operating Instructions Jun 07 2020 As the Blue Angels' aircraft in the late 1950s, Grumman's F11F-1 Tiger came to symbolize the speed and might of U.S. Navy airpower. The Tiger was originally conceived as an upgrade of the F9F Cougar. It eventually morphed into a new design, that incorporated the area rule to enable cruising speeds up to 1.1 Mach. The prototype flew in 1954, and carrier trials commenced in 1956. Eventually seven squadrons flew F11Fs. Hampered by maintenance issues affiliated with the J65 engine, and the fact that the Vought Crusader was clearly superior, the Tiger had a short service life. It was withdrawn from carrier duty after four years, in 1961. Only 199 were built. The remaining Tigers flew in a training capacity, and the Blue Angels continued to fly them for over a decade, 1957-1969. Originally printed by the U.S. Navy, this handbook provides a fascinating glimpse inside the cockpit of the Tiger. Originally classified 'restricted', the manual was declassified and is here reprinted in book form.
